DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: the following headers are missing:

Field of the Invention

Background of the Invention

Summary of the Invention

Brief Description of the Drawings

Detailed Description of the Preferred Embodiments

Appropriate correction is required.

Claim Objections

Claims 10-12 are objected to because of the following informalities: should "non-inverting" be "inverting"? Since the feedback is connected to the inverting (-) terminal (see Figure 2).

"said amplifier self-oscillating" discloses at the end of claims 10-12 appears to be repeated, since it is already disclosed in the preamble.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Myers et al. (5,838,193) or Kaizer et al. (4,649,565).

Myers et al. (Fig. 1) disclose an modulator circuit comprising: an RF input (10) to an error amplifier (12); a comparator (20) can be read as a detector; an output stage comprises transistors (60, 70); a low pass filter (90) can be read as an output filter for providing filtered signal to the error amplifier (12).

Kaizer et al. (Fig. 7) disclose an amplifier circuit comprising: an RF input (1) to differential amplifier (30) which can be read as an error amplifier; a comparator (31) can be read as a detector; an output stage comprises transistors (36, 39); a low pass filter (40) can be read as an output filter for providing filtered signal to the error amplifier (30).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Modgil et al. (5,352,986); Nelson (5,521,549)) show further analogous prior art circuitry.

This art is deemed relevant and should be carefully reviews before any amendment is filed.
